

PARTS KLEEN

SPC Parts Kleen is a solvent degreaser that is a highly effective replacement for chlorinated solvents.

Parts Kleen is an all-purpose cleaner/degreaser. It has a medium evaporation rate so you can see it doing the cleaning.

Parts Kleen has a solvency (KB rating) near double gasoline and kerosene. The higher the KB rating, the better the cleaner. It also leaves no residue and is di-electric to 26,000 volts.

Parts Kleen in aerosol has a powerful cleaning stream to aid in degreasing.

Parts Kleen is available in aerosol, 5 gallon containers, 55 gallon drums and totes.

While the perfect degreaser has yet to be formulated, **SPC Parts Kleen** comes very close.

Chlorinated solvents date back to the 1920's. They were hailed as "safety solvents" and a boon to Industry because the risk of fire was greatly reduced. However, kerosene was much less expensive and in certain "dirty" plants* kerosene was still the solvent of choice.

In the 1960's Chlorinated solvents became the product of choice (i.e.- trichloroethane, carbon tetrachloride, and perchloroethylene). They dry in a "flash. This is great in some applications because of the reduction in cleaning time but it can leave a residue. However, it became clear in the 1970s and 80s that they cause various health and environmental problems **.

FEATURES

- Controlled evaporation rate
- Improved degreasing properties
- Cleans quickly and simply
- Available in aerosol and bulk
- Safe on most plastics

PROPERTIES

Boiling Range	313-348 F
Vapor Density	4.4
Specific Gravity	819
%Volatile	100
Appearance	Clear liquid
Solvency Rating	50 (K.B.)

*i.e. Weirton Steel 1983
